PROFESSIONAL SUMMARY

Results-driven Software Engineer with 3+ years of experience designing, optimizing, and migrating **scalable enterprise applications** using **Java, Spring Boot, GraphQL, and React.js**. Proven expertise in transforming legacy **monolithic systems** into high-performance **microservices architectures**, improving reliability, scalability, and system resilience. Strong background in **performance optimization, asynchronous processing, caching, and fault-tolerant application design**. Experienced in **full-stack development, CI/CD automation, and cloud-native deployments**. Recognized for **technical leadership, mentorship, and consistently delivering high-quality, business-impacting solutions** in agile environments.

TECHNICAL SKILLS

Programming : Java, JavaScript, Solidity, C/C++.

Frameworks : Spring Boot, Spring Microservices, GraphQL, REST APIs, Node.js, Express.js, Ethereum

Databases & Cloud : PostgreSQL, MySQL, MongoDB, Redis, AWS (EC2, S3, RDS, CloudWatch, IAM).

Tools & Observability : Git, Bitbucket, Maven, JUnit, Mockito, Honeycomb, Splunk, Grafana, Bruno, Postman, IntelliJ IDEA, VS Code, Eclipse.

Architecture & Practices : Microservices Architecture, Performance Optimization, Asynchronous Processing, Caching, Resilience4j, Agile Methodologies, SOLID Principles, Blockchain

PROFESSIONAL EXPERIENCE

Hashedin by Deloitte

Mar 2022 – Present

Software Engineer II (Promoted: Associate → SDE I → SDE II)

RMZ Ecoworld, Bangalore

- Engineered and supported **high-throughput, distributed backend systems** handling up to **30 million requests** per day, with **80k–100k requests** per minute during peak traffic, ensuring consistent performance and availability in production.
- Designed and optimized **GraphQL-based** read and write workflows, achieving **p95 latency under 9 ms for read queries** and under **200 ms for mutations/writes** through efficient schema design, query optimization, **caching**, and **asynchronous** processing.
- Played a key role in migrating a legacy **monolithic platform** to a **microservices architecture** using **Java Spring Boot, GraphQL**, and **PostgreSQL**, improving service isolation, scalability, and achieving a **60%** improvement in system reliability.
- Led performance optimization initiatives by introducing **multithreading, asynchronous execution, Redis caching**, and **advanced SQL tuning**, reducing overall **API response time from 1000 ms to 200 ms** and supporting a **35% increase** in traffic with zero downtime.
- Strengthened system resilience by implementing **Resilience4j patterns (circuit breakers, retries, and time limiters)**, ensuring graceful degradation and stability of critical user journeys during downstream service failures.
- Acted as the **primary technical point of contact** for client teams, directly **gathering requirements**, discussing **production issues**, **triaging critical bugs**, and **driving solution** design and implementation to meet business timelines.
- Owned and **resolved production-critical issues**, performing root-cause analysis using **Honeycomb, Splunk, Grafana**, and **AWS CloudWatch**, and delivering timely fixes to maintain system stability during peak usage.
- Owned technical leadership for a team of 5 engineers** and mentored **10+ junior developers**, driving code quality through reviews, unblocking critical production issues, and supporting daily development tasks to ensure timely and reliable feature delivery.
- Authored and maintained **technical documentation** covering service architecture, performance considerations, and best practices, supporting smoother onboarding and knowledge sharing across teams.

FEATURED PROJECTS

Vercel Clone 📁

The Integrated system for deployment | Mar 2024 – Apr 2024

- Built a microservices-based pipeline to fetch React projects from GitHub and **automate the build process**.
- Implemented cloud integration by uploading compiled builds to **Cloudflare R2** for scalable storage.
- Developed a deployment service to host React builds on **specified ports with custom configuration**.
- Streamlined **CI/CD workflow**, reducing manual intervention and simplifying cloud management of React apps.

BookStore 📁

Platform for read and write stories | Oct 2023 – Nov 2023

- Built a **microservices-based backend** system using Java Spring Boot for scalable and modular application design.
- Integrated MongoDB for **data persistence** and **Redis for caching** to improve performance and responsiveness.
- Developed **REST APIs** to manage book data and user interactions with reliable and efficient data handling.
- Designed loosely coupled services with **asynchronous execution** to improve system resilience and throughput.

AWARDS & ACHIEVEMENTS

- Top Impactor Award (Semi-Annual) – 2×**, recognizing sustained high-impact contributions and ownership of critical deliverables.
- Tech Champion Award (Quarterly)** for driving technical excellence and resolving complex engineering challenges.
- Excellence Award (Monthly) – 5×**, awarded for consistent performance, reliability, and high-quality delivery.
- GCP Professional and Associate certifications**, demonstrating cloud platform proficiency.

EDUCATION

Sahyadri College of Engineering and Management

Graduation: July 2022

Bachelor of Engineering in Information Science Engineering | GPA: 8.71/10.0

Adyar, Mangalore

- Relevant Coursework: Data Structures & Algorithms, Database Management Systems, Computer Networks & Security, Software Engineering Principles & Practices, OOPS, Unix & Shell Programming, Design Patterns, Operating Systems
